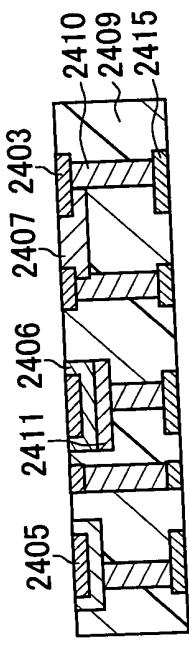

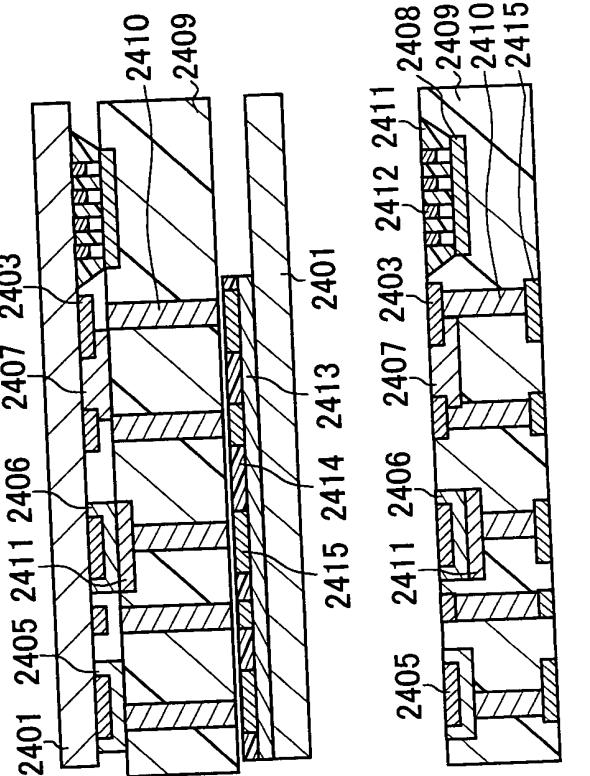

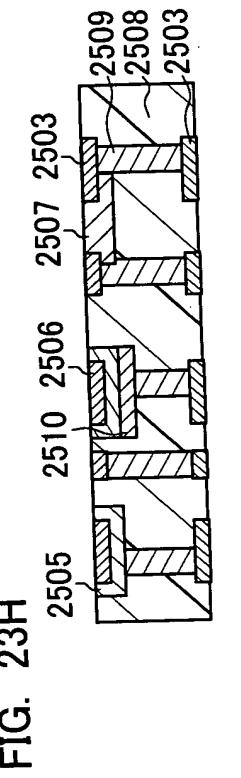

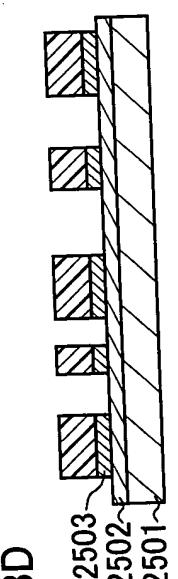

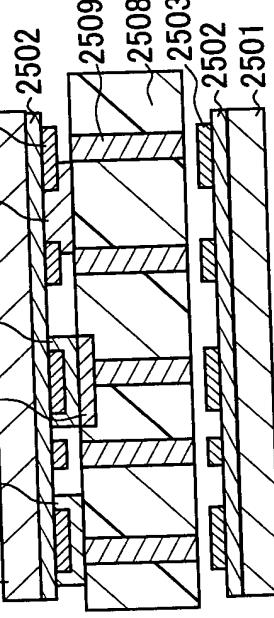

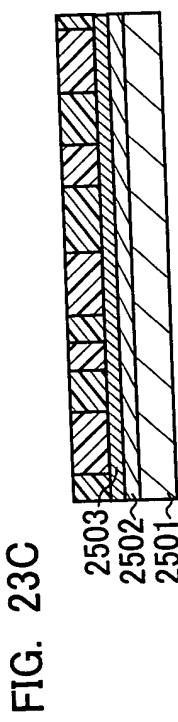

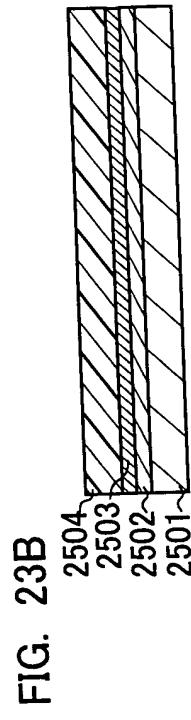

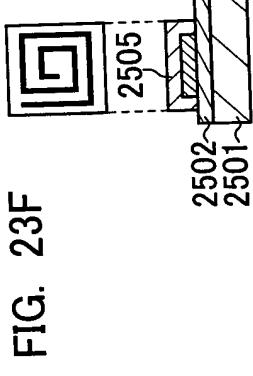

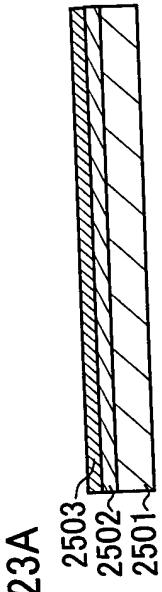

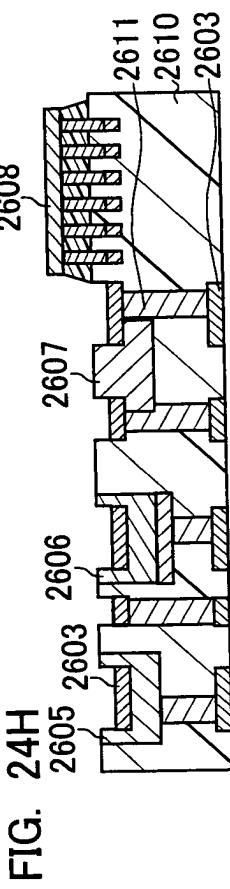

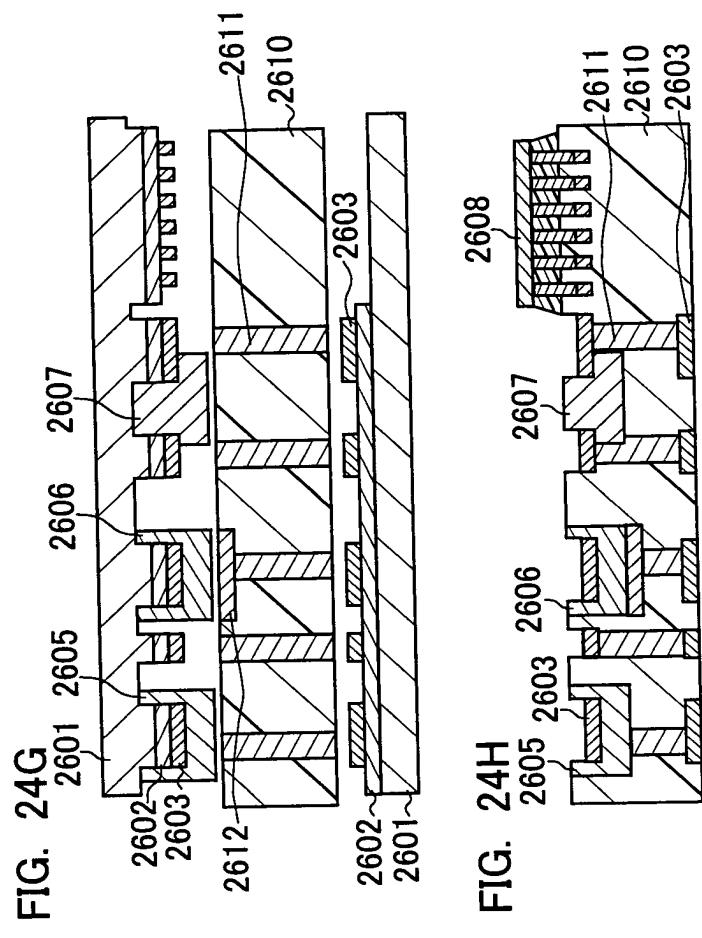

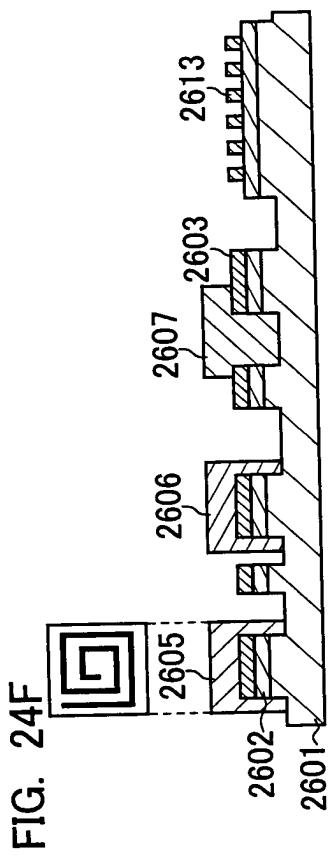

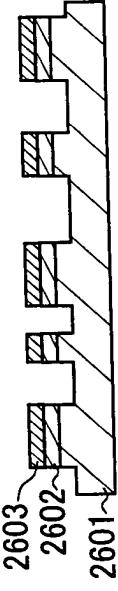

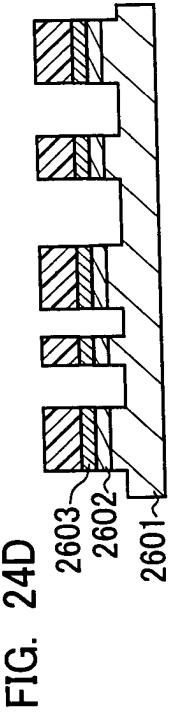

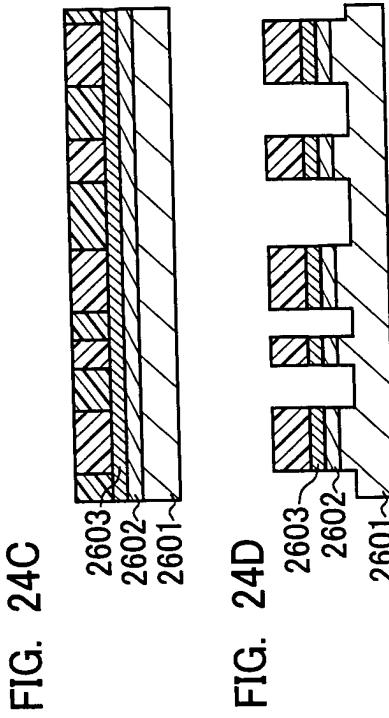

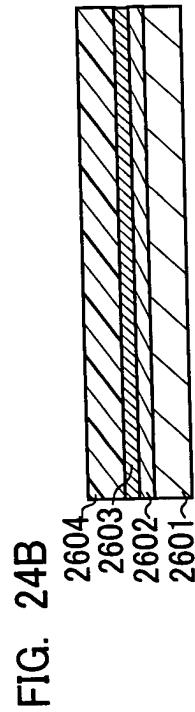

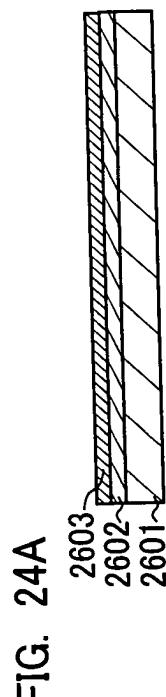

FIG. 22G

Geological cross-section diagram for G. 22E'. The diagram shows a series of vertical boreholes labeled 2401 through 2411, with their respective depths indicated above the borehole symbols. The layers are represented by different hatching patterns: a thick horizontal line for the base, followed by a diagonal line pattern, a vertical line pattern, and a thin horizontal line pattern at the top. The boreholes are located at various depths, with 2401 at the surface and 2411 at approximately 100 meters.
